

Mobile Solutions

designed for tomorrow

The market today is motivating telecom companies - service providers and product firms - to capture market share through technology leadership and customer service. As telecom markets enter a period of consolidation and further regulatory modifications, developing new products and services in wire line and wireless sectors is still a priority.

Mobiquest has been formed with integration of top-notch professionals from Software and Telecom industries to provide innovative solutions. With a state-of-the-art development center and testing labs, Mobiquest provides high quality, cost effective and timely solutions to customers around the Globe. Mobiquest offers a full suite of mobile application services to our customers .

Our Services

Custom Mobile Application Development

We provide full-cycle application services from requirements formulation to application development and support. Whether you are going to create a flexible and easy-to-deploy mobile solution or willing to extend the target market of an existing software, we have the perfect mobile application development for you.

a) **On Device Portal**

We have expertise in building ODP using Flashlite and J2ME, either building applications from scratch or by using standard ODP toolkits. Mobiquest has developed an ODP framework using reusable components which can be customized as per customer requirement.

b) **Smart Browser Clients**

We can even help you to build smart mobile clients using Ajax based widgets and other technologies.

c) **Wireless Browser (WAP) Applications**

If you have an existing web application, we can port it to WAP rapidly and easily for a low-fixed price. We will optimize your site for wireless browsing within days.

Mobile Application Porting & Localization

a) **Application Porting**

We have certified engineers, in-house testing and porting tools to ensure that your application work across a wide variety of networks and devices. We specialize in the following technologies:

Languages - J2ME, BREW, Windows Mobile, Symbian and Palm OS

Devices - Blackberry, LG, Motorola, Nokia, Samsung, Sony Ericsson, Treo, iPhone, Sharp, Toshiba

b) **Application Localization**

We have the expertise to localize the applications for various markets to extend the reach of your application be it language or devices or cultural aspects.

Mobile Application Testing

Enterprise applications delivered on mobile devices are extending the workforce like never before. Many applications that were deployed as desktop applications are now being ported on mobile devices, often built to be as agile and robust as PC based applications

Our testing methodology would take into consideration a number of characteristics unique to the mobile paradigm:

- Increased complexity of emerging handheld devices
- Greater sensitivity to security and load related problems in wireless infrastructure
- Increased complexities of scale

Pre-certification Services

We also provide a full range of wireless application pre-certification services ranging from process and requirements consultations to end-to-end carrier/platform specific compatibility and interoperability testing.

Speed

We have the testing and porting tools to port your applications faster and cheaper.

Experience

We have one of the best and most experienced engineering teams in the market.

Methodology

We have a proven application architecture and delivery process that not only reduces time to market but also guarantees quality.
